PROFILE

Second-year Computer Engineering student at LIU with hands-on experience designing and building autonomous embedded systems, now working as a Software Engineering Intern on a Java/Spring Boot backend track. Comfortable moving between circuit design, firmware, and software development, with a growing focus on cybersecurity built through self-directed, hands-on study. Looking for opportunities where I can contribute, learn fast, and work on things that matter.

EXPERIENCE

Software Engineering Intern, Java/Spring Boot Track — TechTalks

Aug 2026 – Oct 2026

Remote, Team-Based

- Working within a team on a backend project built with Java and Spring Boot, following Agile-style workflows
- Collaborating using Git/GitHub for version control, Jira for task tracking, and Notion for documentation

EDUCATION

Lebanese International University (LIU)

Bachelor of Science, Computer Engineering

Tripoli, Lebanon

2025 - 2028

TECHNICAL SKILLS

Programming: Java & OOP, Spring Boot, Python, React.js

Database: MySQL

Tools & Workflow: Git & GitHub, Jira, Notion

Embedded Systems & Hardware: Arduino & Embedded Systems, Electric Circuits, Digital Logic Design, Tinkercad (3D Design & Circuit Simulation)

Cybersecurity: TryHackMe (Top 1%), PortSwigger (Web Security Academy)

PROJECTS

Autonomous Firefighting Robot

Introduction to Engineering Final Project

- Designed and built a 4WD robot using an Arduino UNO, L298N motor driver, and DC motors to autonomously detect and extinguish fires with zero human input during operation
- Implemented flame-detection logic with analog flame sensors to identify a fire's direction and trigger a fan-based extinguishing response
- Simulated the full circuit in Tinkercad before physical assembly to validate the design ahead of building
- Programmed Arduino firmware to handle sensor input, autonomous decision-making, and motor/fan output in real time

CERTIFICATIONS

- The Cybersecurity Threat Landscape — LinkedIn Learning
- Cybersecurity 101 — TryHackMe (Credential ID: THM-YM587Y7TG2)
